

## What is Intersorb Plus?

**Intersorb Plus is a conventional soda lime Carbon Dioxide absorbent comprised of short porous 3mm diameter strands.**

Intersorb Plus is suitable for use within anaesthetic breathing systems. It is available in two indicator colour changes, pink to white and white to violet. Exhaustion of Intersorb Plus is clearly indicated by the colour change.

### Features and Benefits

**Intersorb Plus is made of 3mm strands.** Its uniform shape allows for easy identification of Intersorb Plus.

**Intersorb plus offers white to violet and pink to white colour change.** This offers a clear indication as to when the product has become exhausted.

Intersorb Plus exceeds the requirements of the United States Pharmacopia (USP).
