

To make ensure a hospitalised cat is as comfortable as possible and has choice and control over its environment to help reduce stress, the VETINOX polyester cage range evolves with 2 new specific Cat-Friendly references. Manufactured in our factory in France from the finest components, they meet animal welfare standards required at GOLD accreditation levels.

VETINOX **POLYVET** Cat-Friendly cages benefit from all VETINOX's expertise and come with glass door as a standard (with or without oxygen hole). Modular and stackable, they can be installed on one of our convenient mobile platforms: patients are easy to access, cages move freely for easy cleaning or reorganization purposes.

Cat-friendly polyester cages come without gratings and can be combined either with VETINOX's gratings or with the CliniCare bed sore prevention mattresses.

CP800000

"POLYVET" Cat-Friendly SHORT STAY (<24h) hospitalization cage

Hospitalization cage specially designed for the animal well-being (Cat-Friendly) for a short hospitalization (<24h). This cage is equipped with a perch and a glass door. This equipment meets the IFSM GOLD specifications.

CP800024

"POLYVET CONDO" Cat-Friendly LONG STAY (>24h) hospitalization cage

Hospitalization cage specially designed for the animal well-being (Cat-Friendly) for a long hospitalization (>24h). This cage is equipped with a perch and a glass door. Also, for the comfort of the patient, it features a removable partition allowing to separate the sleeping area from the bedding area. This equipment meets the IFSM GOLD specifications.

ITEM	OUTSIDE DIMENSIONS (mm)			INSIDE DIMENSIONS (mm)			MATERIAL		VOLUME	
	Width	Depth	Height	Width	Depth	Height	M 1	M 2	Interior floor space	Perch
POLYVET	730	650	670	670	645	610	Polyester	Stainless steel 304 L	4321 cm ²	828 cm ²
POLYVET CONDO	1460	650	670	1400	645	610	Polyester	Stainless steel 304 L	2 x 4476 cm ²	828 cm ²

Soft, comfortable bedding should always be provided.

The floor material should be warm and pleasant to touch.

A resting area, food and water bowl and litter tray should be placed as far back in the cage as possible.

Ensuring that the cat hides is a very important social protection factor - an 'igloo bed' or even just a cardboard box with high sides are examples.

If a cat can hide in its cage, this will greatly reduce stress and improve welfare.

Ideally, in addition to having a place to hide, providing facilities for a cat to sit up high will also improve well-being, this may take the form of a perch.
