

X-Ray Protection Glasses MI-50PP

X-Ray Protection Glasses M50PP

The MI-50PP provides complete eye protection from all sides without plastic gaps from scattered radiation. This ensures that the eye is completely surrounded by radiation protection material and thus offers the best possible protection against scattered radiation.

In addition, the angle of the hinges can be adjusted, which ensures an optimal fit at different working angles. The frayed and soft nose pad ensures a stable fit on the nose.
